

Programming task

The task is to build a simple calculator that can perform the following:

- Add
- Subtract
- Multiply
- Divide

Sample inputs and outputs:

1. $1 + 3 = 4$
2. $3 \times 5 = 15$
3. $6 + 3 / 3 = 7$ // Note: Arithmetic operations order has significance

Additional requirements:

- The code must be in VC++
- The user will receive the input from the command line.
- The program must use the following pure abstract class:

```
class Operation
{
public:
    virtual double Perform(double A, double B) = 0;
}
```

Good luck
